

***Peace of mind...***

***Do you have it?***

***Can you afford not to?***

**Remote Vessel  
Monitoring  
System**

***What is a remote vessel monitoring system?***

A remote vessel monitoring system is any system that will notify a boat owner of problems on their boat while they are not present. These systems range from friends and neighbors to high end integrated monitoring and control systems.

The Boatsense™ Remote Monitoring System is simple to install and use and is available at a fraction of the cost of more expensive systems. We are able to offer this extremely reliable, low-cost solution, because our proprietary system monitors only those most critical conditions, the bilge level and battery condition. And we utilize the cell phone you already own for controlling our system.

Additionally, we offer three inputs for systems you may already have in place, such as smoke, heat security or a variety of other local monitoring systems, including vessel movement (GPS).

We have eliminated complex local control systems like keypads and screens that fail easily in the harsh marine environment. The Boatsense™ Remote Monitoring System will send a message to your cell phone alerting you to a problem you can take care of *before* it becomes a time-consuming and costly loss.

***What are other remote monitoring options?***

There are many extremely complex systems available on the market that will notify you, or a central location, of many different conditions on your boat. These systems are very expensive to purchase and install and require a high monthly subscription fee.

***Simple - Reliable - Affordable***

The Boatsense™ Solutions **Remote Monitoring System** monitors your boat's condition while you are away. Boatsense is a simple and inexpensive solution, yet robust and durable enough to provide continuous and wireless remote asset monitoring in the harsh marine environment. Boatsense enables you to remotely monitor the vital signs of your boat, and alerts you via text message of conditions that, if not corrected in a timely fashion, could cause major physical and economic damage. Boatsense provides "peace of mind" by sending a message to your cell phone when your boat has a problem.

**BSS2.2 - The Boatsense™ Remote Vessel Monitoring System with external antenna** is delivered ready to monitor bilge level and battery condition. Additionally there are three auxiliary inputs that can be used to monitor any system with a visual or audible alarm output. These can be used for fire, security or any other system. BSS2.2 will text message up to three cell phones of any monitored condition. Boatsense's proprietary method of utilizing the cell phone that you already own as the keypad for the system keeps the most vulnerable part of the system where it belongs, at your fingertips at all times.

**BSS3.2 - The Boatsense™ Remote Vessel Monitoring System with external antenna and GPS** provides all the capabilities of BSS2.2 plus GPS with remote GPS-positioning monitoring.

- ALERT!!!**
- ✓ Bilge & water levels
  - ✓ Tank levels
  - ✓ Temperature (high & low)
  - ✓ Smoke & fire
  - ✓ Intrusion, security & motion
  - ✓ Power & battery level
  - ✓ Gas leaks
  - ✓ Humidity
  - ✓ Location & movement (GPS)
  - ✓ Equipment start & stop
